The background of the slide is a light-colored map, possibly of a city, with various streets and landmarks visible. A prominent red location pin is placed on the left side of the map, near the center vertically. The text is overlaid on this map.

Data and CC licenses

[Log in / create account](#)

Where CC0 is not desired for whatever reason (business requirements, community wishes, institutional policy...) CC licenses can and should be used for data and databases — with the important caveat that CC 3.0 license conditions do not apply to uses of data and databases that do not implicate copyright. Read more about this [here](#).

Data and CC license use cases

This is a list of uses of CC licenses for data. For uses of the CC0 public domain dedication for data, see CC0 use for data.

Australia Federal Government

Three of the largest sources of Australian federal government data sets — Australian Bureau of Statistics (ABS), Geoscience Australia and the still beta [data.australia.gov.au](#) — are all licensed by default under CC Attribution. Together these sites provide free access to all of Australia's census data, official geoscientific information and knowledge, and other miscellaneous government data (such as the location of public toilets). The ABS and [Geoscience Australia](#) have detailed copyright and attribution guidelines to assist with user implementation. [data.australia.gov.au](#) played a major role in the Mashup Australia competition run by Australia's Government 2.0 Taskforce. Results from the contest (over 50 datasets) were released on [data.australia.gov.au](#).

Australia Queensland State Government

Various data in the Australian state of Queensland's Office of Economic and Statistical Research
